

**Care Coordination Innovations Project  
CCIP Data Release Update #2**

**Trailing Zeros in Data Set:**

We have noticed that due to a system error, an additional attribute with a null value was added to the recipient and provider files issued to organizations prior to March 20, 2012. This null value will appear as a trailing comma in the data.

It appears that pulling the data into a software program should not create a problem. After importing the data, the additional field that trails the last defined field can be safely ignored. This should have no effect on data analysis.

If any partner organization finds that the trailing zero creates a problem, HFS will re-generate the file. Please pardon the error.
