Regional Extension Center

April 2021

2021 Environmental Scan Illinois Health IT Survey

Overview

2021 Illinois Health IT Survey Report

The 2021 Illinois Health IT Survey Report was prepared by the Illinois Health Information Technology Regional Extension Center (ILHITREC) at Northern Illinois University.

The purpose of the Survey was to determine the extent of health information technology use by providers and hospitals in Illinois.

The results are used to better facilitate the adoption of electronic health records (EHR) and Health Information Exchange (HIE) systems in Illinois through the Medicaid Promoting Interoperability (PI) Program.

Overview

2021 Illinois Health IT Survey Report

Where available and appropriate, comparative data from the Illinois Environmental Scan from 2011, 2016 and 2019 were included. Also included is comparative data from various CMS data sources such as HealthIT.gov and HealthData.gov.

Since the inception of the Medicaid PI program, the industry has changed, complicating appropriate comparative analysis. The industry has been consolidating practices, hospitals, and specialty clinics making comparisons from early years less appropriate for type of practice, urban/rural, and REC territory.

Additionally, early surveys were directed toward providers. As complexity around the program increased, most practices established a dedicated resource focusing on Medicaid PI. As a result, fewer providers respond today than did in the past and responses often reflect practice level information across multiple locations.

Survey Highlights

2021 Illinois Health IT Survey Report

Respondent Demographics

- ✓ 175 respondents completed the survey representing around 3,800 providers.
- ✓ Respondents to the 2021 survey were generally smaller in terms of number of providers. 69% of 2021 respondents indicated 10 or fewer providers in their practice compared to 51% in 2019.
- ✓ A greater percent of respondents represented primary care practices, critical access hospitals, and rural health clinics than past surveys.

Survey Highlights

2021 Illinois Health IT Survey Report

Medicaid PI Program Participants

- ✓ Nearly 66% of respondents have providers enrolled in the Promoting Interoperability (PI) Program representing a minimum of 1,189 providers who are in the Medicaid PI program.
- ✓ Over 75% of respondents indicated that the Medicaid PI program encouraged or supported their adoption of CEHRT. And nearly 72% of respondents said the incentive payments were worth the effort for the adoption, implementation, or upgrade of EHR technology.
- ✓ The Illinois Medicaid PI program supports all four key goals from the Federal Health IT Strategy Plan 2020 - 2025: <https://www.healthit.gov/topic/2020-2025-federal-health-it-strategic-plan>
 - ✓ Promote Health and Wellness
 - ✓ Enhance the Delivery and Experience of Care
 - ✓ Build a Secure, Data-Driven Ecosystem to Accelerate Research and Innovation
 - ✓ Connect Healthcare with Health Data

Survey Highlights

2021 Illinois Health IT Survey Report

EHR Utilization

- ✓ In 2011, 61% of Illinois providers had an EHR in place, compared to 100% of practices in 2021.
- ✓ Those participating in the Medicaid PI program are more likely to share information electronically, 74% of all 2021 respondents compared to 83% of those in the Medicaid PI program.
- ✓ Nearly 70% indicate their EHR is capable of bi-directional data exchanges in I-CARE. Of those, 70% are using this functionality and 15% are planning to.

Survey Highlights

2021 Illinois Health IT Survey Report

Hospital ADT Notifications

- ✓ 77% of hospitals indicate their organization has a process to generate data related to inpatient and/or emergency room admission, discharge, and transfer (ADT). 100% indicate the process is automated through their hospital administrative system which could be part of an EHR or an ADT system.
- ✓ The three biggest challenges for hospitals to getting external data is *Conflicting information from different doctors*, *Different state rules/regulations*, and *Too much data from other doctors*.

Survey Highlights

2021 Illinois Health IT Survey Report

Provider ADT Notifications

- ✓ An increasing number of providers indicate having a process in place to receive ADT notifications, 55% in 2016 compared to 70% in 2021. 89% of respondents indicate these notifications come directly from the hospital with 90% of those notifications coming via Fax.
- ✓ There is a substantial drop in ADT notifications over the past few years. 46% of 2019 respondents indicate receiving ADT notification for 75% or more of their patients, compared to just 27% in 2021.
- ✓ Half of respondents currently receive ADT notifications. Of those that do not currently receive ADT notifications, 15% are unable to receive them and 85% say hospitals do not send electronic notification despite 77% of hospitals reporting they have a process to send them.
- ✓ The biggest challenges, for providers, to getting data from outside their organization include: *Conflicting information from different doctors, Different state rules/regulations, and Too much data from other doctors.*

Survey Highlights

2021 Illinois Health IT Survey Report

Health Information Exchange

- ✓ 73% indicated they would use an accurate directory of direct, secure electronic message addresses to send or receive data from other providers. CMS now offers a list of Direct addresses at [NPI Files \(cms.gov\)](#) however, population of this information and awareness of the data is still growing.
- ✓ Organizations participating in a HIE increased from 32% (2016) to 51% (2021). Of those participating in a HIE, 36% used Care Everywhere and 36% were using an EHR option.
- ✓ Barriers to health information exchange included lack of access to provider direct addresses (58%), referring provider refuses to accept direct messages (58%), and EHR vendor costs were prohibitive (46%).

Medicaid Promoting Interoperability (PI) Participation

Highlights Medicaid PI Program Participation

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ Fewer 2021 survey respondents (66%) have providers participating in the Medicaid PI program compared to the 2016 survey (85%) due to program completions or challenges with meeting Stage 3 requirements. 4663 providers and 12 hospitals received payment for attestations in 2016 while the 2020 program year will have approximately 700 provider attestations and 0 hospital attestations.
- ✓ A greater number of practices plan to attest in 2021 (76%) than 2020 (67%).
- ✓ More practices are confident in meeting Stage 3 requirements in 2021 (68%) than in 2020 (63%).
- ✓ 76% of respondents indicated that the Medicaid PI program encouraged or supported their adoption of CEHRT.
 - The top three ways the Medicaid PI program has done this is through patient portals, I-CARE bidirectionality, and direct messaging.

Highlights Medicaid PI Program Participation

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ Nearly 72% of respondents indicate that the incentive payments were worth the effort for the adoption, implementation, or upgrade of EHR technology.
- ✓ 11% of respondents would not have invested in EHR technology without the incentive payments, while 46% would have invested without the incentive, but not as quickly.
- ✓ The top four ways adoption of a CHERT has improved practices is:

✓ Decrease in medication errors	64%
✓ Improved patient throughput	60%
✓ Improved efficiency in reporting	60%
✓ Improved referral process	57%

EHR Utilization

Highlights

Highlights EHR Utilization

2021 Illinois Health IT Survey Report

Key Takeaways

EHR Adoption

- ✓ 2011 - 61% of Medicaid providers had EHRs (most served urban areas).
- ✓ 2016 - 91% of practices had EHRs.
- ✓ 2021 - 100% of practices had EHRs.

Among survey respondents, the top 5 EHR vendors include:

- ✓ 2011 - NextGen, EPIC, Allscripts, Centricity, Meditech.
- ✓ 2016 - eClinicalWorks, EPIC, Practice Fusion, Cerner, NextGen.
- ✓ 2021 - eClinicalWorks, EPIC, NextGen, Evident (CPSI), Meditech.

EHR Utilization

2021 Illinois Health IT Survey Report

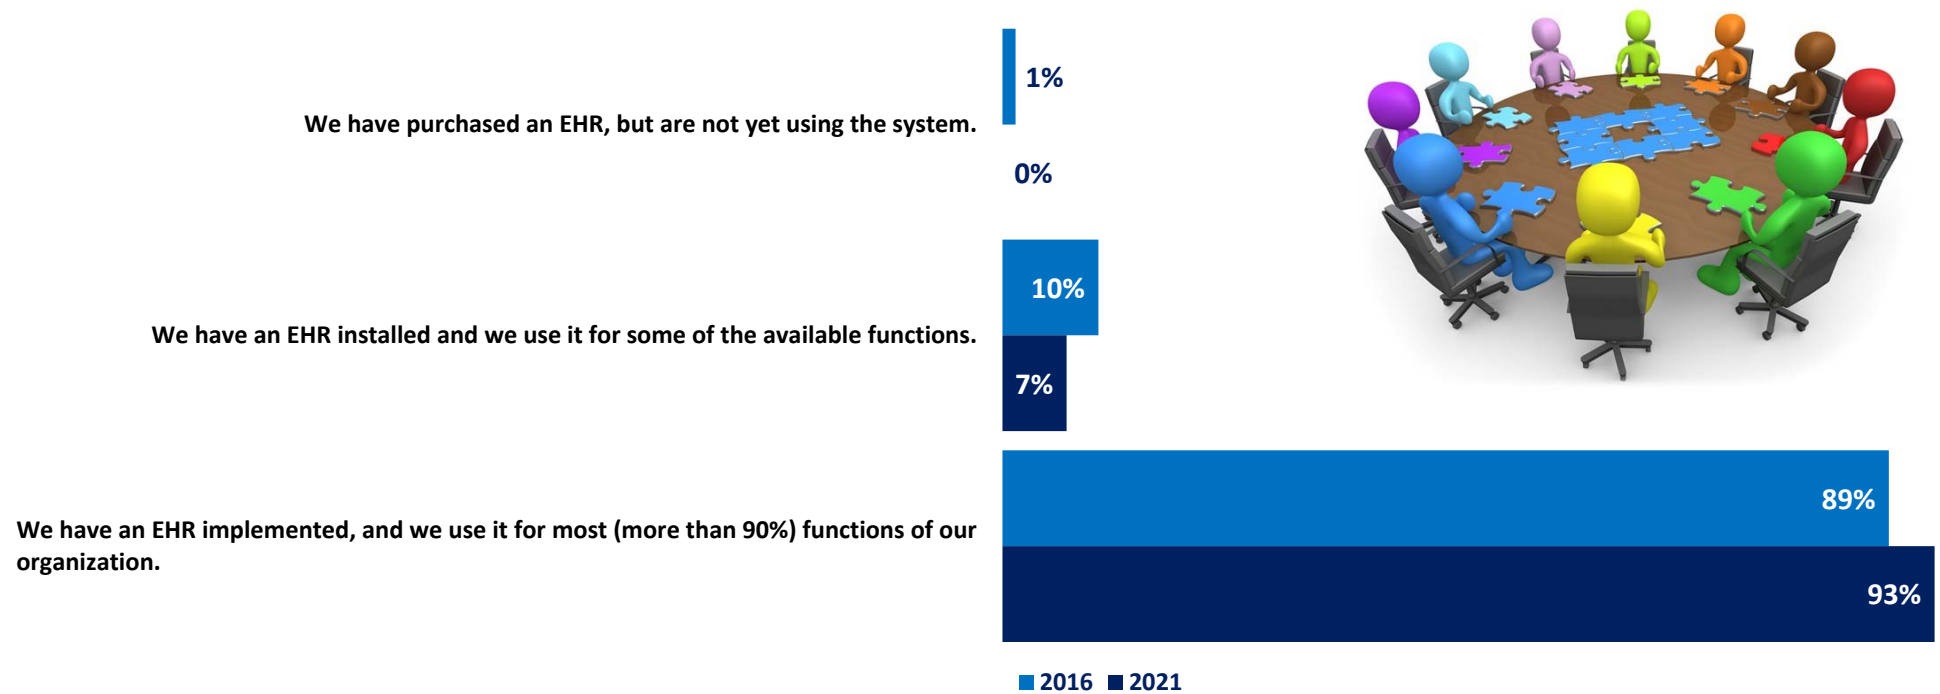

Key Takeaways

- ✓ Respondents indicate sharing information with
 - State immunization registries 65%
 - Patients 55%
 - Other hospitals 51%
 - Other clinicians 50%
- ✓ Those participating in the Medicaid PI program are more likely to share information electronically, 74% of all 2021 respondents compared to 83% of those in the Medicaid PI program.
- ✓ 69% indicate their EHR is capable of bi-directional data exchanges in I-CARE. Of those, 70% are using this functionality and 15% are planning to use it.
- ✓ In 2011, just over 50% nationwide were reporting electronically to immunization registries. In 2021, 74% of Illinois respondents report electronically to I-CARE. [Electronic Reporting to Immunization Information Services \(IIS\) among Medicare Eligible Professionals, 2011-2014 \(healthit.gov\)](#)

EHR Utilization

Hospitals and ADT Notifications

Highlights

Highlights Hospitals and ADT Notifications

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ 77% of hospitals indicate their organization has a process to generate data related to inpatient and/or emergency room admission, discharge, and transfer (ADT) compared to 97% in 2016. This drop could be due in part to the change in mix of respondents as well as the loss of a HIE in 2019 offering ADT/HL7 functionality statewide. In 2013, only 41% of hospitals were able to send and receive secure electronic messages. [Hospital Capability to Send and Receive Secure Electronic Messages \(healthit.gov\)](https://www.healthit.gov/hospital-capability-to-send-and-receive-secure-electronic-messages)
- ✓ 100% indicate the process is automated through their hospital administrative system which could be part of their EHR or an ADT system.
- ✓ Only 5% report using care coordination software such as MHN or Patient Ping. A statewide ADT/HL7 system was initiated shortly after the implementation of this survey so subsequent increases are anticipated.

Highlights Hospitals and ADT Notifications

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ Most respondents report the following data from outside their organization would help improve patient care:
 - Discharge summaries
 - Lab results
 - Continuity of care documents
 - List of medications prescribed by other providers*

- ✓ The biggest challenges to getting data from outside their organization include:
 - Conflicting information from different doctors 46%
 - Different state rules/regulations 39%
 - Too much data from other doctors 36%
 - Patient identity mismatch 32%
 - Concerns with liability 29%

* CCDs do not consistently provide a complete medication list and often cannot be easily integrated into EHRs.

Provider ADT Notifications

Highlights

Highlights Provider ADT Notifications

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ A growing number of providers have a process in place to receive ADT notifications (55% in 2016, 63% in 2019, and 70% in 2021). 89% indicated these notifications come directly from the hospital with 90% of those coming via Fax.
- ✓ 75% use this information to make contact with the patient and 28% to inform the patient's primary care provider. When asked why they use ADT notifications, 73% said for efficiency (reduces staff workload) and 57% for convenience (questions to referral network/direct messaging easier to coordinate) .
- ✓ Fewer practices receive ADT notifications compared to past years. In 2019, 46% of respondents indicate receiving ADT notification for 75% or more of their patients, compared to only 27% in 2021.
- ✓ 82% of respondents indicate ADT notifications are *valuable* or *very valuable*.

Highlights Provider ADT Notifications

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ Half of respondents indicate currently receiving ADT notifications. Of those that do not currently receive ADT notifications, 15% are unable to receive them and 85% say hospitals do not send electronic notification despite 77% of hospitals reporting they have a process to send them.
- ✓ The biggest challenges to getting data from outside their organization include:
 - Conflicting information from different doctors 32%
 - Different state rules/regulations 28%
 - Too much data from other doctors 32%
 - Patient identity mismatch 16%
 - Concerns with liability 40%
- ✓ 73% indicate they would use an accurate directory of direct, secure electronic message address to send or receive data from other providers. CMS now offers a list of Direct addresses at [NPI Files \(cms.gov\)](https://www.cms.gov/npi) however, population of this information and awareness of the data is still growing.

*CMS now offers a list of Direct addresses at [NPI Files \(cms.gov\)](https://www.cms.gov/npi) however, population of this information and awareness of the data is still growing.

If you had access to an accurate directory of direct, secure electronic message addresses would you use it frequently to send or receive data from other providers? Why or why not?*

73% indicate Yes

"Yes, because it is efficient, quick, HIPAA compliant and accurate."

"Yes, but no one else seems to..."

"Yes, because it helps to provide accurate patient history and records."

"Yes, convenience, patient information readily available at the point of care."

"Yes, if it could be integrated directly into the patient EHR chart. If not, we would not utilize as much."

"Yes, it would be helpful for my doctors, to improve communication between providers."

15% indicate No

"No. Too much typing...hours on the computer."

"We don't send messages...doctors always call [telephone] ."

"Only if it was integrated into my EMR ... not likely to use if separate."

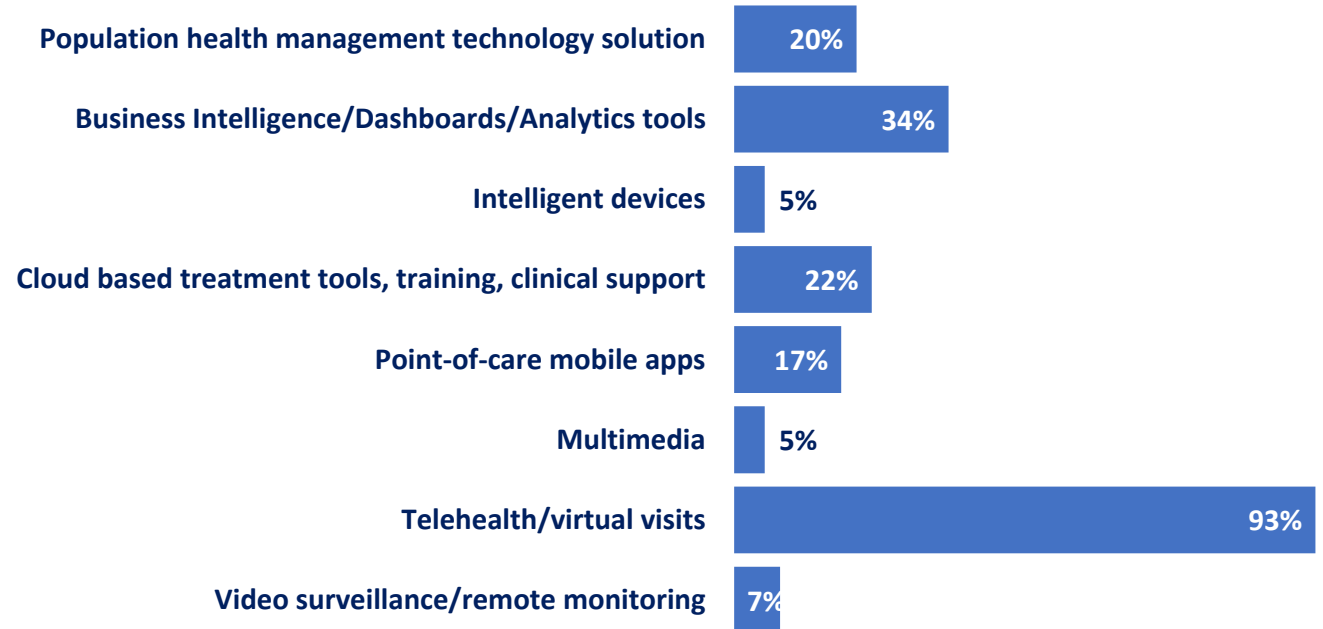

"No. Just too many ways to communicate. Phone or text has always worked... no one takes the time."

"I would not use it because over the past 6 years our agency has requested direct messaging CCDA's instead of faxing discharge information and none of them would comply. We have 5 large health systems using CEHRT's but no process to send or receive direct messaging from EHR's other than their own. Epic to Epic yes, Epic to Cerner no, Cerner to Epic no, etc..."

Provider ADT Notifications

2021 Illinois Health IT Survey Report

Does your organization use additional health IT solutions to support your patients/clients care?

Note: Respondents completing this question could check multiple options. Therefore, the number of individual responses does not equal the total number of responses.

Health Information Exchange

Highlights

Health Information Exchange

2021 Illinois Health IT Survey Report

Key Takeaways

- ✓ What constitutes a HIE is generally not well defined or understood. Therefore, gauging who truly participates in a HIE is harder to determine. Available HIE options for Illinois include the combination of Epic Care Everywhere, and Carequality and Commonwell. Not all electronic sharing options meet the requirements of the Medicaid PI Incentive Program.
- ✓ Those participating in a HIE increased from 32% in 2016 to 51% in 2021. Of those, 36% use Care Everywhere, 36% are using an EHR option, and 22% are using Commonwell.
- ✓ Secure electronic services used include vendor mediated exchanges such as Epic Care Everywhere, 69% and Direct messages, 56%.
- ✓ Barriers to health information exchange include:
 - ✓ lack of access to provider direct addresses 58%
 - ✓ referring provider refuses to accept Direct messages 58%
 - ✓ EHR vendor costs are prohibitive 46%

Economic Impact of Medicaid PI Program

Highlights

Economic Impact

Healthcare Industry in the State of Illinois (2020)

The Healthcare Sector contributed over \$52 billion to Illinois' Gross Domestic Product (GDP) in 2017.

Between 2000 and 2019, its contribution has increased by 52.3%.

In addition, the healthcare industry's share of the State's total GDP increased from 5.4% to 6.8%

The Healthcare Industry's Contribution to Illinois GDP

Note: GDP figures are stated in billions of constant (2012) dollars.
Source: U.S. Bureau of Economic Analysis, 2020.

Economic Impact of Medicaid PI Program

Economic Impact

Healthcare Industry in the State of Illinois (2020)

DIRECT

Jobs, wages and output (sales or revenue) sourced directly to Illinois Healthcare Providers

INDIRECT

Impact of the suppliers and vendors of Illinois Healthcare Providers

INDUCED

Impact of the spending of employees of Healthcare Providers on the Illinois economy

+

TOTAL

Sum of direct, indirect and induced impacts

For every **100 jobs** created by Illinois Healthcare Providers, an additional **71 jobs** are created or supported in other industries.

For every \$1 million spent by Illinois Healthcare Providers, additional value is generated in other industries.

- **\$874,000 in output** (sales/revenue)
- **\$859,000 added to Illinois' GDP** (value-added)
- **\$572,000 in labor income** to employees and self-employed workers.

Estimated Contribution to the Illinois Economy (2020)

State of Illinois	Direct	Indirect	Induced	Total	Multiplier
Employment	672,842	218,535	257,479	1,148,856	1.71
Output (\$ billions)	\$95.3	\$40.0	\$43.4	\$178.7	1.87
Value-added (\$ billions)	\$58.0	\$23.6	\$26.2	\$107.7	1.86
Labor Income (\$ billions)	\$49.1	\$15.0	\$13.1	\$77.2	1.57

Economic Trends

Healthcare Industry in the State of Illinois (2020)

Although the Healthcare sector accounts for a relatively small share of total employment in the State, it has grown rapidly.

From 2000 to 2020, healthcare employment has added more than 118,000 jobs, an increase of 23.8 %.

Although the COVID 19 crisis put considerable stress on the healthcare system, industry employment declined by over 30,000 or 4.8% between 2019 and 2020.

Although an aging population drives demand, automation and a declining working-age population may slow future job growth.
