PURPOSE, BACKGROUND, AND OVERVIEW OF 2022 CHANGES

The purpose of this addendum is to provide a standardized net income conversion table updated for 2022 tax rates. The last standardized net income conversion table considered 2021 tax rates. It is published as an addendum to a 2017 report entitled *Technical Documentation: Illinois Schedule of Basic Obligations and Standardized Net Income Table*.¹ This is also an addendum to the same report.

BACKGROUND

State statute (750 ILCS 5/505) directs the Illinois Department of Healthcare and Family Services (HFS) to develop and promulgate a standardized net income conversion table that computes net income by deducting the standardized tax amount from gross income. The provision for the standardized net income conversion table is shown below. It essentially provides that HFS can calculate the conversion table using withholding or estimated payments. Since its inception in 2017, the income conversion table uses the federal income withholding formula published by the IRS² and the Illinois withholding formula published by the Illinois Department of Revenue.³

Excerpt of State Statute (750 ILCS 5/505(a)(3)(C) and (D) Directing HFS to Develop Standardized Net Income Conversion Table

(C) As used in this Section, "standardized tax amount" means the total of federal and state income taxes for a single person claiming the standard tax deduction, one personal exemption, and the applicable number of dependency exemptions for the minor child or children of the parties, and Social Security and Medicare tax calculated at the Federal Insurance Contributions Act rate.

(I) Unless a court has determined otherwise or the parties otherwise agree, the party with the majority of parenting time shall be deemed entitled to claim the dependency exemption for the parties' minor child.

(II) The Illinois Department of Healthcare and Family Services shall promulgate a standardized net income conversion table that computes net income by deducting the standardized tax amount from gross income.

(D) As used in this Section, "individualized tax amount" means the aggregate of the following taxes:

(I) federal income tax (properly calculated withholding or estimated payments);

(II) State income tax (properly calculated withholding or estimated payments); and

(III) Social Security or self-employment tax, if applicable (or, if none, mandatory retirement contributions required by law or as a condition of employment) and Medicare tax calculated at the Federal Insurance Contributions Act rate.

² For example for the 2017 table, federal income tax withholding was determined using U.S. Department of Treasury Internal Revenue Service. (2016). *Circular E: Employer's Tax Guide, Publication 15 for use in 2017*. <https://www.irs.gov/pub/irs-pdf/p15.pdf>.

³ For example for the 2017 table, State income tax withholding was determined using Illinois Department of Revenue. (2016) *Form IL-W-4: Employee's and other Payee's Illinois Withholding Allowance Certificate and Instructions*. Retrieved from <http://www.revenue.state.il.us/taxforms/withholding/il-700-t.pdf>.

SUMMARY OF CHANGES

There were no changes in federal or state tax rates from 2021 to 2022. There are only small changes to income brackets, the social security wage base limit, and the Illinois personal exemption amount. The IRS continues to provide different withholding formulas depending on the year of the IRS W-4 form the employee has on file. The 2021 conversion table used the 2019 IRS W-4 form. For consistency and other calculation issues with the 2021 IRS W-4 form (that are described in detail later), the 2022 conversion table also uses the 2019 IRS W-4 form.

The updated tables are contained at the end of this document as well as a side-by-side comparison.

FEDERAL TAX CHANGES IN 2022

There were no statutory changes to federal tax rates from 2021 to 2022. The IRS only made inflationary changes to the income brackets. For employees using the 2019 IRS W-4 form, the monthly allowance remained unchanged from its previous levels: \$358 per month. As described in the *2021 Addendum*,⁴ the IRS made gradual changes beginning in 2018 to simplify forms and instructions to comport with The Tax Cuts and Jobs Act of 2017 (P.L. 115-97) without requiring all employees to complete a new IRS W-4 form. Instead, the IRS changed the withholding formulas to accommodate differences between IRS W-4 forms from 2019 and earlier years and IRS W-4 forms beginning in 2020. As described in the *2020 Addendum*,⁵ the IRS began offering six options for computing taxes in 2020 (including options to accommodate IRS W-4 forms from various years as well as manual calculation and automated calculations). It instructs employers to use the method that best suits their payroll system and employees. The IRS continued to offer these options in 2021. Moreover, the IRS continues to offer these options in 2022.⁶

USE OF 2019 IRS W-4 FORM

The IRS did not change the W-4 form in 2018, made small changes to the 2019 W-4, and significantly redesigned the W-4 form in 2020. The 2020 changes continue to appear in the 2022 IRS W-4 form.⁷ However, as previously stated, the IRS does not require employees who have an earlier form on file to submit a new form merely because of the redesign. The IRS withholding formulas generally yield the same amounts, particularly at lower and middle incomes and only diverge slightly at extremely high incomes.

One reason for continued use of the 2019 IRS W-4 form is consistency. Another reason is that there are some calculation issues with the 2020, 2021 and 2022 IRS W-4 forms, particularly with the child tax credit.

Complications Due to Child Tax Credit

The 2020 and 2022 forms overstate the impact of the child tax credit at lower incomes. The 2021 IRS W-4 understated the impact of the child tax credit at all incomes due to the temporary increase and expansion of the child tax credit in tax year 2021. All three years used the same formula that assumes all families receive a child tax credit of \$2,000 per child per year for a head of household whose total income will be \$200,000 per year or less and \$400,000 per year or less if married filing jointly. Through the American Rescue Plan Act (ARPA) of 2021, the child tax credit was increased, and eligibility was expanded for tax year 2021 only.⁸ The tax credit increased from \$2,000 per child per year to \$3,600 per child ages 5 and under, and \$3,000 per child ages 6 through 17 per year. The 2021 child tax credit was made available to families with no taxable income and no tax liability as long as they had a qualifying child. In contrast, in most prior years and 2022, a low-income parent may only qualify for a partial child tax credit (called the “additional child tax credit,” which is actually a refund up to \$1,400 per child per year). In other words, the \$2,000 per child per year deduction on the 2020 and 2022 IRS W-4 form overstates the likely child tax credit or additional child tax credit for the parent with the majority of parenting time when that parent has little income in some circumstances. In turn, this would overstate the income available for child support. In 2021, when the child tax credit was temporarily increased and expanded, the 2021 IRS W-4 would understate the child tax credit for the parent with the majority of parenting time in most circumstances. In turn, this would understate, the income available for child support. Regardless of the tax year, at higher incomes, the deduction intends to simulate the child tax credit, but the phase-in and phase-out of the full amount at various income levels is complicated and does not lend itself well for simulation. Instead, the 2020, 2021 and 2022 IRS W-4 calculations cause a precipitous decrease in after-tax income when gross income increases from \$200,000 to \$200,001 per year (which is \$16,666 to \$16,667 per month) because the calculation no longer considers the child tax credit (which is \$2,000 per child or \$167 per month) above this income threshold. The actual child tax credit in the year-end filing (*i.e.*, IRS 1040 form) phases out gradually not abruptly once the threshold of \$200,000 per year is met as it does in the 2020, 2021 and 2022 IRS W-4 form. In contrast, no adjustment for the child tax credit is made when the 2019 IRS W-4 form is used.⁹

Although the President’s proposed *Build Back Better Act*, continues the increased and expanded Child Tax Credit beyond 2021, it is not included in congressional versions of the bill. At the time that this

⁸U.S. Department of Treasury Internal Revenue Service. (Jan. 11, 2022.) *2021 Child Tax Credit and Advance Child Tax Credit Payments – Topic A: General Information*. Retrieved from <https://www.irs.gov/credits-deductions/2021-child-tax-credit-and-advance-child-tax-credit-payments-topic-a-general-information>

⁹ The 2019 IRS W-4 actually provides an adjustment for the child tax credit that is complicated. It is not applied because it overstates the child tax credit and additional child tax credit to low-income parents with the majority of parenting time. It considers four income ranges (*i.e.*, less than \$71,201 in total income, \$71,201 to \$179,050 in total income, \$179,051 to \$200,000 in total income and over \$200,000 in total income). Each income range suggests a different number of personal allowances per child. The numbers range from zero to four per child.

report is being written, the prospects for extending the 2021 child tax credit increase and expansion and the bill in general looks dim.

As explained in the *2020 Addendum*, the child tax credit also was not included in the 2017, 2018, 2019, and 2020 conversion tables. The 2019 IRS W-4 worksheet allotted four allowances for each child of a single or married filing separately tax filer with a total income up to \$71,201 per year for the child tax credit. As noted in the *2020 Addendum*, four allowances is an unreasonable deduction for a low-income party because a low-income party often is not eligible or only partially eligible for the child tax credit. Strict application of the IRS W-4 worksheet works best for those who have a good estimate of their annual income. Estimating annual income accurately is more difficult for those who work at hourly wage, have inconsistent hours from week to week, realize no compensation if they skip work because of a personal illness or an ill child, or change employment over the course of a year.

In all, the consideration of the Child Tax Credit in the tax tables is difficult. The IRS calculation using the 2020 or later IRS W-4 worksheet generally assumes that low-income families would be eligible for the full child tax credit; hence, more income than they actually have. Temporary changes in the Child Tax Credit, such as what occurred in 2021, add to the confusion and difficulty. There is no simple way to include it accurately for all income ranges, as such and for all the reasons stated above, it is not included in the Gross to Net Income Conversion Table.

Use of the 2019 IRS W-4 Worksheet

For simplification, the last three Gross to Net Income Conversion Table assumed that each party continues to use the 2019 IRS W-4 form as described in the *2019 Addendum*.¹⁰ The assumptions are that the parent without the majority of parenting time claims one allowance for self and the parent with the majority of parenting time for the claims two allowances (for self and head of household) regardless of the number of children.¹¹ It is assumed that each parent does not: have multiple jobs, have a spouse who works, have other income, adjust for the child tax credit, have other expected deductions beyond the standard deduction, and exercise the option for extra withholding. These assumptions are consistent with earlier versions of the income conversion table.

Besides its age, another disadvantage of using the 2019 IRS W-4 form is that it does not provide separate tax formulas for single filers and filers who head households. In contrast, the 2020, 2021, and 2022 IRS W-4 forms do.

In all, the advantages of continued use of the 2019 W-4 form outweigh the disadvantages of its use.

FICA AND 2022 CHANGES

The only change in the FICA was the social security wage base limit increased from \$142,800 in 2021 to \$147,000 in 2022.¹² This has the impact of small decreases in after-tax income for monthly gross incomes above \$11,900 (\$142,800 per year). The Social Security tax rate of 6.2 percent applies to gross incomes up to the social security wage base limit. The Medicare tax, which is 1.45 percent, applies to all gross incomes. There is no Medicare wage base limit. An additional 0.9 percent applies to incomes in excess of \$200,000 per year.

STATE TAXES AND 2022 CHANGES

The only change to Illinois income taxes was an increase to the personal exemption amount from \$2,375 per year in 2021 to \$2,425 per year in 2022.¹³ The State income tax remains at 4.95 percent. Illinois assesses no tax on the dollar value of exemptions. An exemption may be based on the number of allowances. An employee is allowed one allowance for self and any dependents that the tax filer is entitled to claim for federal income tax purposes. Beginning in 2018, taxpayers cannot claim a personal exemption for minor children dependents.¹⁴ To mirror the federal withholding forms, it is assumed that the parent without the majority of parenting time claims one allowance for self and the parent with the majority of parenting time claims two allowances (for self and head of household) regardless of the number of children using the 2019 IRS W-4 form. For the 2022 IRS W-4 form, neither parent claims any allowances for federal tax purposes, so none are claimed for state income tax purposes either.
