

**Care Coordination Innovations Proposal  
Update #5**

To all data users:

Please note HFS has recently corrected errors in the provider table of the data dictionary.

This table labeled all "RINS" data elements as indicators (0/1). While the recipient file contains a simple indicator that a particular recipient received a same Type of Service, the corresponding data elements on the provider table is *not* an indicator that a provider provided this same Type of Service. Rather, the "RINS" data elements identify the total number of recipients that a particular provider treated.

We have corrected the error. Please incorporate this change into your data analysis and accept our apology for any inconvenience the error has caused.
