PURPOSE, BACKGROUND, AND OVERVIEW OF 2021 CHANGES

The purpose of this addendum is to provide a standardized net income conversion table updated for 2021 tax rates. The last standardized net income conversion table considered 2020 tax rates. It is published as an addendum to a 2017 report entitled *Technical Documentation: Illinois Schedule of Basic Obligations and Standardized Net Income Table*.¹ This is also an addendum to the same report.

BACKGROUND

State statute (750 ILCS 5/505) directs the Illinois Department of Healthcare and Family Services (HFS) to develop and promulgate a standardized net income conversion table that computes net income by deducting the standardized tax amount from gross income. The provision for the standardized net income conversion table is shown below. It essentially provides that HFS can calculate the conversion table using withholding or estimated payments. Since its inception in 2017, the income conversion table uses the federal income withholding formula published by the IRS² and the Illinois withholding formula published by the Illinois Department of Revenue.³

Excerpt of State Statute (750 ILCS 5/505(C) and (D) Directing HFS to Develop Standardized Net Income Conversion Table

(C) As used in this Section, "standardized tax amount" means the total of federal and state income taxes for a single person claiming the standard tax deduction, one personal exemption, and the applicable number of dependency exemptions for the minor child or children of the parties, and Social Security and Medicare tax calculated at the Federal Insurance Contributions Act rate.

(I) Unless a court has determined otherwise or the parties otherwise agree, the party with the majority of parenting time shall be deemed entitled to claim the dependency exemption for the parties' minor child.

(II) The Illinois Department of Healthcare and Family Services shall promulgate a standardized net income conversion table that computes net income by deducting the standardized tax amount from gross income.

(D) As used in this Section, "individualized tax amount" means the aggregate of the following taxes:

(I) federal income tax (properly calculated withholding or estimated payments);

(II) State income tax (properly calculated withholding or estimated payments); and

(III) Social Security or self-employment tax, if applicable (or, if none, mandatory retirement contributions required by law or as a condition of employment) and Medicare tax calculated at the Federal Insurance Contributions Act rate.

(E) In lieu of a standardized tax amount, a determination of an individualized tax amount may be made under items (I), (II), or (III) below. If an individualized tax amount determination is made under this subparagraph (E)....

SUMMARY OF CHANGES

There were no changes in federal or state tax rates from 2020 to 2021. There are only small changes to income brackets, the social security wage base limit, and the Illinois personal exemption amount. These changes reflect that there was little inflation recently. The IRS continues to provide different withholding formulas depending on the year of the IRS W-4 form the employee has on file. The 2020 conversion table used the 2019 IRS W-4 form. For consistency and other calculation issues with the 2021 IRS W-4 form (that are described in detail later), the 2021 conversion table also uses the 2019 IRS W-4 form.

The updated tables are contained at the end of this document as well as a side-by-side comparison.

FEDERAL TAX CHANGES IN 2021

There were no statutory changes to federal tax rates from 2020 to 2021. The IRS only made small inflationary changes to the income brackets. For employees using the 2019 IRS W-4 form, the monthly allowance remained unchanged from its 2020 level: \$358 per month. As described in the *2020 Addendum*,⁴ the IRS made gradual changes beginning in 2018 to simplify forms and instructions to comport with The Tax Cuts and Jobs Act of 2017 (P.L. 115-97) without requiring all employees to complete a new IRS W-4 form. Instead, the IRS changed the withholding formulas to accommodate differences between IRS W-4 forms from 2019 and earlier years and IRS W-4 forms beginning in 2020. As described in the *2020 Addendum*, the IRS began offering six options for computing taxes in 2020 (including options to accommodate IRS W-4 forms from various years as well as manual calculation and automated calculations). It instructs employers to use the method that best suits their payroll system and employees. The IRS continues to offer those six options in 2021.⁵

USE OF 2019 IRS W-4 FORM

The IRS did not change the W-4 form in 2018, made small changes to the 2019 W-4, and significantly redesigned the W-4 form in 2020. The 2020 changes continue to appear in the 2021 IRS W-4 form.⁶ However, as previously stated, the IRS does not require employees who have an earlier form on file to submit a new form merely because of the redesign. The IRS withholding formulas generally yield the same amounts, particularly at lower and middle incomes and only diverge slightly at extremely high incomes.

One reason for continued use of the 2019 IRS W-4 form is consistency. Another reason is that there are some calculation issues with the 2020 and 2021 IRS W-4 forms. Both forms overstate the impact of the

child tax credit at lower incomes and would create a precipitous decrease in net income of the parent with the majority of parenting time once that parent's total income reaches \$200,000 per year (\$16,667 per month). A low-income parent may only qualify for a partial child tax credit (called the "additional child tax credit," which is actually a refund up to \$1,400 per child per year). In other words, the \$2,000 per child per year deduction on the 2020 and 2021 IRS W-4 form overstates the likely child tax credit or additional child tax credit for the parent with the majority of parenting time when that parent has little income in some circumstances. In turn, this would overstate the income available for child support. At higher incomes, the deduction intends to simulate the child tax credit, which is a maximum of \$2,000 per child per year, but the phase-in and phase-out of the full amount at various income levels is complicated and does not lend itself well for simulation. Instead, the 2020 and 2021 IRS W-4 calculation causes a precipitous decrease in after-tax income when gross income increases from \$200,000 to \$200,001 per year (which is \$16,666 to \$16,667 per month) because the calculation no longer considers the child tax credit (which is \$2,000 per child or \$167 per month) above this income threshold. The actual child tax credit in the year-end filing (*i.e.*, IRS 1040 form) phases out gradually not abruptly once the threshold of \$200,000 per year is met as it does in the 2020 and 2021 IRS W-4 form. In contrast, no adjustment for the child tax credit is made when the 2019 IRS W-4 form is used.⁷

For similar reasons, the 2020 Gross to Net Income Conversion Table assumed that each party continues to use the 2019 IRS W-4 form as described in the *2019 Addendum*.⁸ The 2020 assumptions are that the parent without the majority of parenting time claims one allowance for self and the parent with the majority of parenting time for the claims two allowances (for self and head of household) regardless of the number of children.⁹ It is assumed that each parent does not: have multiple jobs, have a spouse who works, have other income, adjust for the child tax credit, have other expected deductions beyond the standard deduction, and exercise the option for extra withholding. These assumptions are consistent with earlier versions of the income conversion table.

As explained in the *2020 Addendum*, the child tax credit also was not included in the 2017, 2018, 2019, and 2020 conversion tables. The 2019 IRS W-4 worksheet allotted four allowances for each child of a single or married filing separately tax filer with a total income up to \$71,201 per year for the child tax credit. As noted in the *2020 Addendum*, four allowances is an unreasonable deduction for a low-income party because a low-income party often is not eligible or only partially eligible for the child tax credit. Strict application of the IRS W-4 worksheet works best for those who have a good estimate of their annual income. Estimating annual income accurately is more difficult for those who work at hourly

⁷ The 2019 IRS W-4 actually provides an adjustment for the child tax credit that is complicated. It is not applied because it overstates the child tax credit and additional child tax credit to low-income parents with the majority of parenting time. It considers four income ranges (*i.e.*, less than \$71,201 in total income, \$71,201 to \$179,050 in total income, \$179,051 to \$200,000 in total income and over \$200,000 in total income). Each income range suggests a different number of personal allowances per child. The numbers range from zero to four per child.

[file:///F:/1_1_march1/illinois/2020/Posted on website/2019Addendum Basic Obligations.pdf](file:///F:/1_1_march1/illinois/2020/Posted%20on%20website/2019Addendum%20Basic%20Obligations.pdf).

⁹ See Lines A and C of the "Personal Allowances Worksheet" in U.S. Department of Treasury Internal Revenue Service. *IRS Form W-4: Employee's Withholding Certificate: 2019*. Retrieved from [2019 Form W-4 \(irs.gov\)](https://www.irs.gov/pub/irs-soi/194990101/w4.pdf)

wage, have inconsistent hours from week to week, realize no compensation if they skip work because of a personal illness or an ill child, or change employment over the course of a year.

Besides its age, another disadvantage of using the 2019 IRS W-4 form is that it does not provide separate tax formulas for single filers and filers who head households. In contrast, the 2020 and 2021 IRS W-4 forms do.

In all, the advantages of continued use of the 2019 W-4 form outweigh the disadvantages of its use.

FICA AND 2021 CHANGES

The only change in the FICA was the social security wage base limit increased from \$137,700 in 2020 to \$142,800 in 2021.¹⁰ This has the impact of small decreases in after-tax income for monthly gross incomes above \$11,475 (\$132,900 per year). The Social Security tax rate of 6.2 percent applies to gross incomes up to the social security wage base limit. The Medicare tax, which is 1.45 percent, applies to all gross incomes. There is no Medicare wage base limit. An additional 0.9 percent applies to incomes in excess of \$200,000 per year.

STATE TAXES AND 2021 CHANGES

The only change to Illinois income taxes was an increase to the personal exemption amount from \$2,325 per year in 2020 to \$2,375 per year in 2021.¹¹ The State income tax remains at 4.95 percent. Illinois assesses no tax on the dollar value of exemptions. An exemption may be based on the number of allowances. An employee is allowed one allowance for self and any dependents that the tax filer is entitled to claim for federal income tax purposes. Beginning in 2018, taxpayers cannot claim a personal exemption for minor children dependents.¹² To mirror the federal withholding forms, it is assumed that the parent without the majority of parenting time claims one allowance for self and the parent with the majority of parenting time claims two allowances (for self and head of household) regardless of the number of children using the 2019 IRS W-4 form. For the 2021 IRS W-4 form, neither parent claims any allowances for federal tax purposes, so none are claimed for state income tax purposes either.
